

Product Description

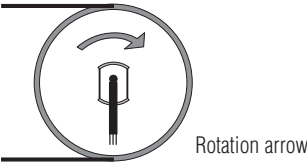

Characteristics

- The backstop runs only in one direction
- Mounted on the rotor shaft, except for the 80LS
- Mounted in the end housing on the 80LS
- No need for an electrical connection

Application

- Single direction inclined belt conveyors
- For preventing roll-back of the belt and load when the power supply is off

The rotational direction of the motorized pulley with backstop is indicated by an arrow on the end housing on the electrical connection side.

Product range

Rotation direction from the electrical connector side	Clockwise Counterclockwise
