

## **Rectifiers for Electromagnetic Brakes**

## **Product description**

## **Characteristics**

- The Rectifier for the electromagnetic brake is an external component and must be installed in a protective box, as close as possible to the Motorized Pulley.
- The fast-acting rectifier starting output voltage equals 0.9 x input AC voltage for 0.004 seconds to 2 seconds, depending on the external resistance. The fast-acting rectifier holding output voltage equals 0.45 x input AC voltage.

## **Applications**

 Motorized pulleys with electromagnetic brake

| Product range  |   |                                  |   |   |                       |
|----------------|---|----------------------------------|---|---|-----------------------|
| Part<br>number | Input Voltage to<br>Motorized Pulley<br>VAC | Input Voltage to<br>Brake<br>VDC | Rectifier Output<br>Starting Voltage<br>VDC | Rectifier Output<br>Holding Voltage*<br>VDC | Rectifier<br>type     |
| SW4B0A         | 230   | 104                              | 207   | 104   | Fast-acting rectifier |
| SW4BED         | 460   | 207                              | 414   | 207   | Fast-acting rectifier |

<sup>\*</sup>Using a fast-acting rectifier will save energy and reduce brake coil heat. These types of rectifiers generate a holding voltage lower than the starting voltage of the brake coil itself.
